

Applicator S1000

Labeling in real time

The applicator S1000 fixed to a SQUIX provides a cost-effective solution for peel-off printers - in semi-automatic operation or when vertically assembled in production lines. A stroke cylinder applies the label on the product.

1 Long service life

Low wear because of a ball-bearing linear guidance

2 Variable product heights

The stroke cylinder enables labeling at different heights. It is available in various stroke lengths.

3 Compressed air pressure regulation unit

Micro filters prevent from contamination.

The regulation unit enables a permanent high labeling quality.

4 High process reliability

Supporting air, suction air and the stroke speed are all adjustable. If sensitive products and packagings are processed, the suction force can be reduced to less than 10 N (1 kg). The vacuum holes are purged after every labeling process to avoid contamination.

5 Label sizes

Label widths 25 to 176 mm and heights 25 to 200 mm can be applied.

6 Supporting air to blow the labels onto the pad

7 Pad

The labels are given to the pad and held there by vacuum. Pad and label are moved by a stroke cylinder to the product.

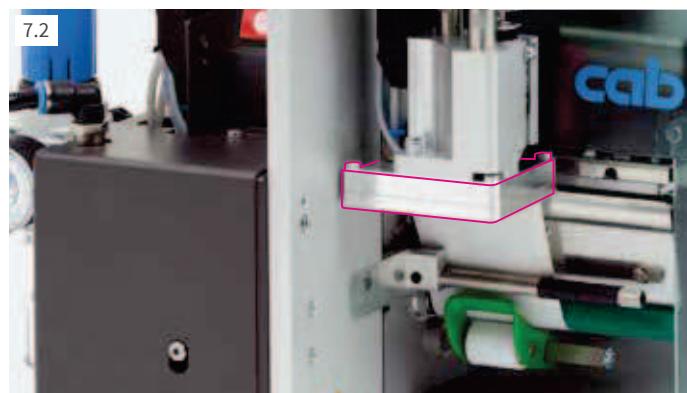

Pre-dispense button

to check the labeling process. Pushing the button once means that the label is printed and taken over by the applicator. Pushing the button again starts the labeling process.

Blow pads

Labels may be blown on pressure-sensitive products. For this, the blow pad moves to a fixed height. The position of the product that has to be labeled is approx. 10 mm below.

| Technical data | Blow pad | | |
|-------------------------|----------------------------|--------------|-----------|
| | A2021 | | M2021 |
| Materialführung | left-aligned | | centered |
| To be used with | SQUIX 2 | SQUIX 4.3, 4 | SQUIX 6.3 |

7.7 7.8

Labeling in real time

An applicator S3200 fixed to a SQUIX provides a cost-effective solution for peel-off printers - in semi-automatic operation or when vertically assembled in production lines. With the S3200 printed labels are automatically applied on the product. The labels are placed with a rotary cylinder 45° to 95° to the horizontal and applied on the product with a short stroke cylinder. All information on the service life, predispose, compressed air regulation, process reliability and supporting air correspond with the applicator S1000 (see page 18).

| Applicator | |
|----------------------------------|---|
| Technical data | S3200 |
| To be used with | SQUIX 2, SQUIX 4.3, SQUIX 4, SQUIX 4.3 M, SQUIX 4 M |
| Rotary cylinder | 45°-95° |
| Stroke cylinder | up to mm |
| Compressed air | 30 bar |
| Cycle time approx. ¹⁾ | 4.5 20 labels/min |

¹⁾ Calculated with label height 40 mm, print speed 100 mm/s

Tamp or blow pads

are manufactured according to the label size.

| Product during labeling | | not in motion | in motion or not in motion | |

Demand modules

7.9

Demand modules S5104, S5106

to label products in motion on a conveyor belt. A product sensor detects the labeling position. The peel-off process is started and at the same time the next label is printed. The transport speed has to be synchronized with the print speed. A reflective sensor monitors the positioning.

| Demand module | | |
|--|--------------------|--|
| Technical data | S5104 | S5106 |
| To be used with | SQUIX 4.3, SQUIX 4 | SQUIX 6.3 |
| Material guide | | left-aligned |
| Label width | mm | 25-116 |
| Label height | mm | 25-200 |
| Distance from print line to peel-off plate | mm | 336-518 |
| Product surface | | flat |
| Product height | | fixed |
| Product during labeling | | in motion, speed synchronized with the printer |
| Cycle time approx. ¹⁾ | 60 labels/min | |

¹⁾ Calculated with label height 100 mm, print speed 100 mm/s
